

c_parser_frontend::
operator_node::VarietyOperator
Node::GetResultConstTag

```
graph LR; A["c_parser_frontend::  
operator_node::VarietyOperator  
Node::GetResultConstTag"] --> B["c_parser_frontend::  
operator_node::VarietyOperator  
Node::GetConstTag"]
```

The diagram illustrates a transformation of a code snippet. On the left, a gray box contains the text 'c_parser_frontend::', 'operator_node::VarietyOperator', and 'Node::GetResultConstTag' on three lines. A blue arrow points from this box to a white box on the right. The white box contains the text 'c_parser_frontend::', 'operator_node::VarietyOperator', and 'Node::GetConstTag' on three lines. The only change between the two boxes is the replacement of 'GetResultConstTag' with 'GetConstTag'.
